

# Aqua-Series II

## Where Superior Strength Meets Corrosion Resistance

Whether your application requires high strength & corrosion resistance or you just want a longer lasting chain, look no further than HKK Aqua-Series II.

Aqua-Series II offers all the advantages of our Superior Capacity Plus® chain with the added benefit of a two step treatment process to resist corrosion. All component parts are treated before the chain is assembled for maximum protection. Aqua-Series II corrosion resistance works best in neutral or near neutral pH environments and far outlasts conventional nickel or zinc plated chains.

HKK Aqua-Series II chains have all the advantages of our standard Superior Capacity Plus® chains including the highest maximum allowable loads in the industry. And the Plus...all Aqua-Series II chains are manufactured with cold-forged solid bushings & solid rollers to limit chain elongation & stretch.

Almost any chain can be made as an Aqua-Series II chain. Call for details 800-631-1056

Aqua-Series II & Nickel Plated  
5376 Hours of outdoor exposure

### Aqua-Series II

Perfect for:

- Outdoor Applications
- Wash Down Applications
- Paper Mills
- Irrigation Applications
- Bottling Plants
- Non-Contact Food Packaging\*
- Marine Environments
- Mining Industry
- Wastewater Treatment
- Road Salting Equipment
