The Leader in Solid Bushing / Solid Roller Technology

**HKKChain**  
HKK

# Aqua-Series II®

## The Leader in Solid Bushing / Solid Roller Technology

HKK Aqua-Series II chains are the perfect choice where corrosion resistance and high strength are needed. Aqua-Series II chains are designed to provide maximum corrosion resistance, far superior to Zinc or Nickel plated chains, while offering all the strength advantages of our Superior Capacity Plus® carbon steel chains. All component parts are treated with a two-step treatment process before the chain is assembled to insure maximum protection.

All Aqua-Series II chains are manufactured with cold-forged solid bushings & rollers to limit chain elongation.

### ■ Salt Water Spray Test

Chain Type	Hours to Corrosion	Maximum Allowable Load #60
Zinc Plated	48-60	2470 lbs.
Nickel Plated	48-60	2470 lbs.
<b>Aqua-Series II®</b>	<b>450-500</b>	<b>2470 lbs.</b>
304 Stainless Steel	No Corrosion	231 lbs.

### ■ Outdoor Exposure

### ■ Aqua-Series II® Perfect for

- ✓ Outdoor Applications
- ✓ Wash Down Applications
- ✓ Paper Mills
- ✓ Wastewater Treatment
- ✓ Non-Contact Food Packaging\*
- ✓ Marine Environments
- ✓ Road Salting Equipment
- ✓ Irrigation Applications
- ✓ Sorting Equipment
- ✓ Many Others

\*Aqua-Series II chains should not be used in applications where chain may come in contact with food. HKK always recommends using stainless steel when contact with food is possible.

AVAILABLE IN MOST SIZES, INCLUDING ATTACHMENT CHAIN
